TECHNOLOGIES

SOFTWARES

PROJECTS

Defense Project | 09/2026 - In progress

Development of a complete and autonomous network infrastructure

- Backend API (PlayFab-like): Development of a robust custom API under ASP.NET Core for secure profile management (JWT) and game data.
- Matchmaking: Player matching algorithm based on latency and skills via a synchronous background service.
- Lobbies & Instances Management: Real-time synchronization system for waiting rooms and the life cycle of game sessions.
- Real-time chat: Integration of a two-way low latency instant messaging optimized with SignalR.

After Impact | 01/2026 - 05/2026

Student Project – Survival - C# - Unity - Creajeux

- Create and Manage Inventory
- Creation and management of the watch (player statistics, time etc.)
